@johnobeto #TechFieldDay Bigger storage would do it also. HP isn't going to make the array config utility upload to a cloud.

08-Apr-10 13:02 | RickVanover

Drobo FS recommendations from bloggers: iSCSI and/or NFS by default would then be good for VMware vSphere labs #TechFieldDay

08-Apr-10 13:00 | Kiwi_Si

@RickVanover Having two apps to manage a product always seems to me of being a shim, an afterthought. #techfieldday

08-Apr-10 13:00 | johnobeto

@johnobeto #TechFieldDay True true. It lacks aggregated management, but that is not what the DroboApps are intended to be.

08-Apr-10 12:57 | RickVanover

Think of BeyondRAID as just a whole bunch of mini RAID sets. <http://bit.ly/b8aXO0> #techfieldday

08-Apr-10 12:56 | scottdlowe

@RickVanover For a single user, maybe. But for me, when I think of maybe deploying it across even 25% of our users? No! #techfieldday

08-Apr-10 12:34 | Texiwill

Drobo Apps & Drobo Dashboard: do I really want to use two apps for one device? I don't, especially when I think of 100s SMBs #techfieldday
